

En este documento anexaré los pasos que seguí para crear un clúster desde la línea de comandos (CMD). Como ya había creado uno anteriormente, tuve que repetir el proceso en otra laptop para poder capturar las evidencias (capturas de pantalla) de cada paso. Aclarado esto, procederemos a la creación del clúster.

Paso 1:

Entras al CDM (puedes o no ejecutarlo como administrador) y pones el comando: atlas setup.

```
C:\Users\laus3>atlas setup
Next steps:
1. Log in and verify your MongoDB Atlas account in your browser.
2. Return to the terminal to create your first free MongoDB database in Atlas.

If you wish to register a new account, run: 'atlas auth register'.
? Select authentication type: UserAccount

To verify your account, copy your one-time verification code:
VQ7P-Q66P

Paste the code in the browser when prompted to activate your Atlas CLI. Your code will expire after 3 minutes.

To continue, go to https://account.mongodb.com/account/connect

Press Enter to open the browser and complete authentication...
```

Paso 2:

Después de correr el comando vas a seleccionar como te quieres registrar, yo le di **UserAccount**. Después de seleccionar eso te dará un código para que lo pongas en una ventana que te abrirá, propio del atlas.

```
C:\Users\laus3>atlas setup
Next steps:
1. Log in and verify your MongoDB Atlas account in your browser.
2. Return to the terminal to create your first free MongoDB database in Atlas.

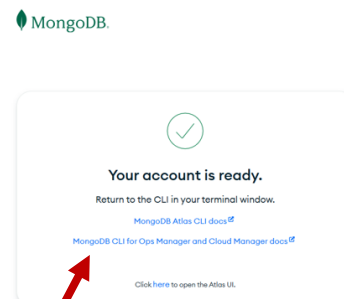

If you wish to register a new account, run: 'atlas auth register'.
? Select authentication type: UserAccount

To verify your account, copy your one-time verification code:
VQ7P-Q66P

Paste the code in the browser when prompted to activate your Atlas CLI. Your code will expire after 3 minutes.

To continue, go to https://account.mongodb.com/account/connect

Press Enter to open the browser and complete authentication...
```

Al ingresar el código dirá que ya te registraste, aparecerá como la imagen de arriba.

Paso 3:

Vas a seleccionar el formato, yo le puse plaintext por error, creo era con json. Y al seleccionarlo se estará creando.

```
notes.
To continue, go to https://account.mongodb.com/account/connect
Press Enter to open the browser and complete authentication...
Successfully logged in as 122020878@veracruz.tecnm.mx.
? Default Output Format: plaintext

[Default Settings]
Cluster Name: Cluster85608
Cloud Provider and Region: AWS - US_EAST_1
Database User Username: Cluster85608
Load sample data: Yes
Allow connections from (IP Address): 177.229.220.50

? How do you want to set up your Atlas cluster? default
Detected clusterWideScaling mode. If you require more flexibility in sharding, use independentShardScaling.
We are deploying Cluster85608...

Store your database authentication access details in a secure location:
```

Paso 4:

Después te preguntará cómo quieres configurar tu clúster de Atlas, yo le puse por default. De ahí se estará configurando el clúster.

```
[Default Settings]
Cluster Name: Cluster88604
Cloud Provider and Region: AWS - US_EAST_1
Database User Username: Cluster88604
Load sample data: Yes
Allow connections from (IP Address): 177.229.220.50

? How do you want to set up your Atlas cluster? default
Detected clusterWideScaling mode. If you require more flexibility in shard scaling, consider using --autoScalingMode independentShardScaling.
We are deploying Cluster88604...

Store your database authentication access details in a secure location:
Database User Username: Cluster88604
Database User Password: W2VzQ2dXakNf

Creating your cluster... [It's safe to 'Ctrl + C']
Cluster created.
Your connection string: mongodb+srv://cluster88604.oywku33.mongodb.net
```

Paso 5:

De ahí te preguntará cómo te gustaría conectar tu clúster, yo puse que con mongosh, pero te da más opciones, como compass, vscode, skip.

```
Loading sample data into your cluster... [It's safe to 'Ctrl + C']
? How would you like to connect to your cluster? [Use arrows to move, type to filter]
> mongosh - MongoDB Shell
compass - MongoDB Compass
vscode - MongoDB for VSCode
skip - Skip Connection
```

Luego te dirá que se está conectando con MongoDB y Mongosh.

```
Loading sample data into your cluster... [It's safe to 'Ctrl + C']
? How would you like to connect to your cluster? mongosh
Current Mongosh Log ID: 6ab5abae90f1b119c22f8dbc
Connecting to: mongodb+srv://<credentials>@cluster88604.oywku33.mongodb.net/?appName=mongosh+2.12.0
Using MongoDB: 8.0.32
Using Mongosh: 2.12.0

For mongosh info see: https://www.mongodb.com/docs/mongodb-shell/

Atlas atlas-e84512-shard-0 [primary] test> |
```

Paso 6:

Por último, corremos el comando: show dbs. Y nos saldrá lo siguiente:

```
Atlas atlas-e84512-shard-0 [primary] test> show dbs
sample_airbnb      57.89 MiB
sample_analytics   9.65 MiB
sample_geospatial  1.82 MiB
sample_guides      40.00 KiB
sample_mflix       131.44 MiB
sample_restaurants  9.80 MiB
sample_supplies     1.94 MiB
sample_training     60.48 MiB
sample_weatherdata  4.97 MiB
admin              0 B
local              0 B
Atlas atlas-e84512-shard-0 [primary] test> |
```

Y eso sería todo por hoy, 24/09/2024.
